

Aluminum Evacuation Stair Chair / Wheel Chair

FEATURES

100% Make in India

- * Constructed from high strength thick aluminum alloy pipes yet light in weight
- * Two telescopic front handles extend out, when knob is pushed. Two rear handles can be opened and locked in place. The 4 non-slip rubber handles provide firm grip while handling the patient
- * Patient to be lifted by two people. One holding the rear handles and the other holding the front telescopic handles. Handles can be stowed and locked when not in use
- * Zippered waterproof rexine can be easily removed for disinfecting. It resists blood, body fluid and stains.
- * 2 - Ø125mm rear wheels with brake and 2 - 76.2mm front wheels provide stability and absorbs shock. Silent wheels with dust cover
- * With a single lever in the back, the wheel chair collapses completely to hang in the ambulance.
- * 3 quick release restraints help to hold the patient safely.
- * Designed for transporting patients up and down the stairs or through confined narrow passages with multiple landing surfaces.
- * Large foot pedal for patients comfort is optional.
